SUMMARY

Backend Software Engineer specializing in Node.js and SQL, with end-to-end ownership of production systems in a startup environment. Experienced in designing scalable APIs, building secure and reliable backend services, and maintaining data integrity. Proven ability to ship production-ready features and solve real-world engineering challenges.

SKILLS

- **Languages:** JavaScript, Python, SQL, HTML/CSS
- **Frameworks & Web:** Node.js, Express, React
- **Databases:** PostgreSQL, MySQL, SQL Server
- **Tools:** Git, GitHub, Docker, Postman, Swagger

Professional Experience

Software Engineer Intern

Hitekology Solutions

March 2026 - Present

- Owned backend architecture and development for a mobile marketplace, designing a modular monolith with clear service boundaries for scalability and maintainability.
- Built and shipped production-ready REST APIs with JWT authentication, secure cookie-based sessions, RBAC, Joi validation middleware, token bucket rate limiting, API versioning, and standardized error handling, improving security and data integrity.
- Delivered core marketplace features including products, stores, filtering, sorting, and cursor-based pagination, enabling efficient data access and seamless user experiences.
- Designed relational schemas from ERDs using MySQL and ORM mapping, ensuring data integrity and reliable query performance.
- Improved production reliability through structured logging and by resolving data integrity and schema inconsistencies affecting system stability.
- Standardized API documentation and testing workflows, reducing integration errors and accelerating frontend-backend development.

Open Source Contribution

Doccano

January 2026

- Improved API correctness by implementing UUID-based resource identification, ensuring consistent resource access and accurate HTTP error handling
- Contributed to a production system used by 1,700+ users, working within established code standards and real-world engineering constraints

Backend Software Engineer Intern — Perpex

Program-based Engineering Internship

July 2025 – October 2025

- Built backend APIs, implementing authentication and role-based access control
- Designed normalized relational schemas and managed migrations for maintainable data systems

EDUCATION

Diploma in Information Technology

Richfield Graduate Institute of Technology • Johannesburg • Completed
