SUMMARY

Backend Software Engineer specializing in Node.js and SQL, with end-to-end ownership of production systems in a startup environment. Experienced in designing scalable APIs, enforcing data integrity, and resolving real-world reliability and integration issues. Delivers production-ready backend systems with minimal oversight.

SKILLS

- **Languages:** JavaScript, Python, SQL, HTML/CSS
- **Frameworks & Web:** Node.js, Express, React
- **Databases:** PostgreSQL, MySQL, SQL Server
- **Tools:** Git, GitHub, Docker, Postman, Swagger

Professional Experience

Software Engineer

Hiteknoology Solutions
March 2026 - Present

- Own backend architecture and development for a mobile marketplace, designing a modular monolith with clear service boundaries to support scalability and long-term maintainability
- Built and shipped production-grade REST APIs with JWT authentication, RBAC, token bucket rate limiting, versioning, and standardized error handling, strengthening API security while reducing integration friction and improving system consistency
- Delivered core marketplace capabilities (products, stores, filtering, sorting, cursor-based pagination), enabling efficient data access patterns and seamless user experiences
- Designed and implemented relational schemas from ERDs using MySQL and ORM mapping, ensuring data integrity and reliable query performance under real usage conditions
- Improved production reliability by introducing structured logging, improving API observability, and resolving data integrity and schema inconsistencies affecting system stability
- Standardized API documentation and testing workflows, reducing integration errors and accelerating frontend-backend development cycles

Open Source Contribution

Doccano
January 2026

- Improved API correctness by implementing UUID-based resource identification, ensuring consistent resource access and accurate HTTP error handling
- Contributed to a production system used by 1,700+ users, working within established code standards and real-world engineering constraints

Backend Software Engineer Intern — Perpex

Program-based Engineering Internship
July 2025 – October 2025

- Built backend APIs, implementing authentication and role-based access control
- Designed normalized relational schemas and managed migrations for maintainable data systems

EDUCATION

Diploma in Information Technology

Richfield Graduate Institute of Technology • Johannesburg • Completed
